SERVICE BULLETIN Formaldehyde Emissions Guarantee

LAMINATE FLOORING: 2015

Dear Valued Customers,

With the recent publicity on formaldehyde emissions from laminate flooring we would like to reaffirm our commitment to compliance with formaldehyde emission standards during manufacturing of our laminate flooring. Low formaldehyde emission wood panels have been a regulatory requirement in Europe for decades and for us who own and operate both laminate and core board manufacturing facilities, are a standard specification.

All Vius laminate flooring is manufactured in Germany with composite wood panels that meets or surpasses the required formaldehyde emission levels established by regulatory bodies in both Europe and North America. This includes the standards set by the California Air Resource Board (CARB). All of our Vius products are CARB Phase 2 certified. Our products are tested by an independent CARB approved Third Party Certifier (TPC) on a quarterly basis. The TPC that we utilize is Entwicklungs – und Prüflabor Holztechnologie GmbH (EPH, www.ephdresden.de).

We apply the CARB Phase 2 standard to all laminate flooring products regardless of the country or state destined for sale.

A requirement of the CARB standard is to label the product stating compliance and notification of the TPC. Should you require further information, please contact us.
